Bar straighteners

2-roll straightening machines

Our 2-roll straightening machines are used for precision straightening of round bars. The hydraulic clamping of the adjusting axes and the compact and torsion-proof design facilitates that highest quality requirements can be kept.

Product sample for 2-roll straightening machines:

Straightening/polishing machine, type SRM 02/080 bl. This machine is part of a bright bar production line for bar diameter up to 80 mm, comprising a heavy-duty bar peeling machine, a straightening/polishing machine and a facing and chamfering unit. The line is complemented by a testing line and a laser marking
Black bar straightening machines

The following straightening machines, for example, are used for pre-straightening of annealed and scaled bars and are arranged in front of a peeling machine, for in-line or separate operation.
